Page 11: (Glossary) and **p.100** (description): The definition of “dibble bar” is incorrect. It should read, “A hand tool made of steel used for planting tree seedlings. The shape of the blade is different depending on the type of seedlings to be planted. This tool is also called a planting bar.”

Page 78: The photos at the top of page 78 are not representative of any species of ash (*Fraxinus*), rather they are photos of Mountain Ash from the genus *Sorbus*. Please insert the following correction:

Ash

Ash (*Fraxinus*) is a genus of the olive family (*Oleaceae*). Of 70 species of ash found throughout the world, 16 are native to North America.

Leaf: Opposite, odd-pinnately compound; lance shaped; leaflet margins are varied - entire to serrate.

Fruit/Seed: Samara with a single seed; seed has a dry, flat, terminal wing.

Economic Importance: Wood from several species of ash are valuable and used to make furniture, tool handles, baseball bats and other wood products. Wildlife consume seeds and twigs. Green ash is planted as a shade and street tree.

Unique Characteristic: Green ash is the most widely distributed species of ash, but white ash is most common.
